

Boi-D Holland

Vibe Coder & Systems Automator

Available for Hire · Remote

High-velocity developer specializing in AutoHotkey automation, game memory analysis, AI agent workflows with Cursor & MCP, and rapid web prototyping. Shipped custom scripts, hosted web bots, and reverse-engineered game mechanics.

AHK	Cheat Engine	Cursor + MCP
Primary Language	Reverse Eng.	AI Workflows
Custom macros & key-hook scripts	Memory debugging & offsets	Context-aware AI dev stacks

EXPERIENCE & PROGRESSION

Automation & AI Workflow Engineer

Independent Projects

2024 – Present

Focused on low-level script automation, memory debugging, modern AI tool integrations, and full-stack hosting.

- Engineered advanced AutoHotkey (AHK) macros using direct input hooks and time-holding logic.
- Utilized Cheat Engine for game reverse engineering, memory mapping, and real-time value debugging.
- Configured Model Context Protocol (MCP) servers within Cursor to build context-aware AI coding pipelines.
- Built and hosted production-ready web applications, micro-sites, and active Discord bots.
- Wrote utility scripts and automation tools in Python for rapid backend data handling.

Graphics & Interface Design

Design Sprints

2024 (10 Months)

Delivered digital graphics, UI layouts, and asset components across web platforms.

- Spent 8 months producing custom visual assets, textures, and banners in Photopea.
- Executed 2 months of rapid UI/UX wireframing and interactive interface mockups in Figma.
- Applied minor compositional and post-processing work using Adobe Creative Cloud suite tools.

AI Model Experimentation & Research

Early AI Workflows

June 2023 – June 2024

Initial foundational year experimenting with early LLM prompting, system instructions, and script generation.

- Tested structural prompt frameworks and automated text generation with early ChatGPT iterations.
- Developed custom prompt structures for single-line automation scripts and code synthesis.

RANKED CAPABILITIES

1. Primary & Automation

AutoHotkey (AHK) · Custom Macro Logic · Python · Input Manipulation

2. Reverse Engineering

Cheat Engine · Memory Analysis · Debugging · Offset Tracking

3. AI Architecture

Cursor IDE · MCP Servers · Prompt Engineering · Vibe Coding Workflow

4. Web & Bot Hosting

Web Hosting · Discord Bots · Vite / React · Tailwind CSS

Graphics & UI/UX

Photopea (8 Mos) · Figma (2 Mos) · Adobe CC Suite · Visual Design

EDUCATION / TIMELINE START

Practical Game Reverse Engineering & Script Automation

Self-Directed Projects & Independent Development

June 2023 – Present
