

Boi-D Holland

Automation Engineer & Systems Developer

Remote · Available for Hire · hollandboid1@gmail.com · github.com/coraboralul-star

PROFESSIONAL SUMMARY

Developer focused on automation systems, process scripting, reverse engineering, and practical web tooling. Experienced building reliable AutoHotkey solutions, memory analysis workflows, production web applications, Discord bots, and efficient Python utilities.

PROFESSIONAL EXPERIENCE

Automation & Systems Engineer Independent Projects Design and maintain automation systems, scripting tools, reverse-engineering workflows, and hosted applications. - Developed advanced AutoHotkey (AHK) macros with direct input hooks, timing logic, and reliable key-event handling. - Performed memory analysis and reverse engineering using Cheat Engine for debugging, mapping, and real-time value inspection. - Built and configured development environments integrating modern IDE tooling and protocol-based context servers. - Shipped and hosted production web applications, micro-sites, and active Discord bots. - Created Python utility scripts for data handling, automation, and backend support tasks.	2024 – Present
Graphics & Interface Designer Design Projects Produced digital assets, UI layouts, and visual components for web and interface work. - Created custom visual assets, textures, and banners over an extended production period using Photopea. - Built UI/UX wireframes and interactive interface mockups in Figma. - Applied compositional and post-processing work with Adobe Creative Cloud tools.	2024 (10 months)
Automation & Prompt Systems Development Independent Research Built foundational automation and structured generation workflows. - Designed structured prompt frameworks and automated text/code generation pipelines. - Developed reusable prompt patterns for reliable single-purpose automation scripts and code synthesis.	June 2023 – June 2024

TECHNICAL SKILLS

Automation & Scripting AutoHotkey (AHK), Custom Macro Systems, Python, Input & Process Control
Reverse Engineering & Analysis Cheat Engine, Memory Analysis, Debugging, Offset Mapping
Development Tooling Modern IDEs, Context Protocols, Structured Prompting, Workflow Automation
Web & Hosting Web Application Hosting, Discord Bots, Vite / React, Tailwind CSS
Design & UI Photopea, Figma, Adobe Creative Cloud, Visual Design

EDUCATION & DEVELOPMENT

Applied Reverse Engineering & Automation Systems Self-Directed Development & Independent Projects	June 2023 – Present
